I am a dedicated and versatile learner with a profound curiosity and deep-seated interest in various fields, including Computer Science, Philosophy and Physics. My ambition is to leverage my extensive knowledge and passion for learning to educate and empower the people around me. I aim to contribute meaningfully to society, both as an individual and as a collaborative team member, by sharing my expertise and fostering a greater understanding of the world we live in.

Languages: Sinhalese (native), English (advanced)

Education

National Institute of Business Management | 2022-2024

Colombo 07, Sri Lanka.

- Completed **Diploma in Software Engineering** with **3.4 GPA**
- Completed **Higher National Diploma in Software Engineering** with **3.5 GPA**

Prince of Wales' College | 2012-2020

Rawatawatta, Moratuwa.

- Completed **G.C.E. Ordinary Level - 2017**
- Completed **G.C.E. Advanced Level - 2020**

Technical Skills

Full Stack Development

- **CareBridge HealthCare Web** (github.com/KaSaNaa/CareBridge)
  react-js | javascript | styled-components | html | css
  - Developed a website using React.js for CareBridge Health Care, facilitating patient management and connecting patients with doctors.
  - Our aim was to fulfill the medical needs of Sri Lankans who lives abroad due to financial difficulties by proposing a low-cost remote diagnosing facilities with the help of local doctors.
  - During this project I learned how to use React efficiently, how to optimize the web surfing experience, API integrations and more.
- **My Portfolio Web** (github.com/KaSaNaa/portfolio)
  react-js | node.js | three-js | mongodb | css
  - I developed and hosted a my own web-site using React.js and Three.js.
  - The portfolio features a clean and professional design, highlighting key projects, skills, and achievements. It is a testament to my ability to develop full-stack web applications and create engaging user experiences.

Mobile Application Development (Android/ Kotlin)

- **EduConnect** (github.com/KaSaNaa/EduConnect)
  kotlin | android-studio | jetpack-compose | sqlite | express.js
  - The Course Registration App streamlines enrollment in short courses by letting users register themselves.
  - Key Features in the app are User Authentication, Course Management, User Registration and Notifications.

Machine Learning for Artificial Intelligence

- **RetroSpectra** (github.com/KaSaNaa/RetroSpectra)
  python | open-cv | CNN | image-processing | keras
  - RetroSpectra is a real-time facial emotion detection application that leverages a Convolutional Neural Network (CNN) to identify human emotions from live video feeds. I gained expertise in building and training CNN models for image classification, enhanced ability to work with real-time data and computer vision libraries and I improved my skills in deploying machine learning models for practical applications

- **Perceptron** (github.com/KaSaNaa/Perceptron)
  python | binary-classifier | CNN | image-processing | mnist
  - Perceptron is an image classification model designed to recognize and categorize numbers based on pre-defined classes. In this project I built my own binary-classifier to check if a number is 5 or not. Based on that binary classifier, I'm building a multi-class classifier that can be used to recognize any number.
